Attention Farmers!

Why remain in the North and stay in doors six months in the year consuming what you raise during the other six months?

Go South where you can work out doors every month in the year, and where you are producing something the year round. If you are a stock raiser you know your stock are now "eating their heads off"and, besides. have to be protected from the rigors of winter by expensive shelter.

Economical stock feeding requires the combination of both flesh forming and fat-forming foods in certain proportions. Alabama and Florida produce in abundance the velvet bean and cassava, the first a flesh producer, and the latter a fat producer, and they are the cheapest and best fattening materials known to the world

More money can be made and with less labor, in general farm ing, fruit and berry growing and truck gardening along our read in the South than in any other section of the Union.
